

Verification

Keeping every claim traceable, and knowing what is being said before it becomes a story.

ONGOING
STARTED ALREADY

WHY IT MATTERS

Your own figures currently drift. Scholarships appear as both **409 and 449**; the target as 3,500, 4,000 and 120 per ward; the programme under two different names. Each of those is something an opponent can hold up.

Fourteen Nandi groups were read from the inside for this work. It surfaced a second opinion poll nobody had cited, an elders' endorsement for a rival, and what a disputed Kalenjin word actually means.

WHAT GETS BUILT

- **One agreed figure set**, pinned and used everywhere
- **A source file** behind every published claim, so anything can be defended within the hour
- **Monitoring** of what is circulating, including the groups that are not searchable from outside
- **Early warning** on a story before it has run for three days

FIGURES CURRENTLY IN CIRCULATION

Scholarships	409 vs 449 → one agreed number
Target	3,500 vs 4,000 vs 120 per ward → one
Launch year	2022 vs 2023 → one
Survival rate	90% estimated → counted

Each unresolved figure is something an opponent can hold up. Pinning them is a morning of work.

SKILLS RESEARCH · INFORMATION ANALYSIS · FACT-CHECKING · MONITORING

TIMELINE

Already underway, unpaid, so the work can be judged before anything is agreed.

WHAT I NEED

Programme records and access to the people who ran each initiative.

LIMIT

This is verification, not polling and not legal advice. Both of those need specialists.

DONE LOOKS LIKE

Every number the campaign says in public can be traced to a document within a minute.
